This publication was produced by Action Against Hunger’s UK MEAL Team, comprising Federico Ercolano, Nicola Giordano, Elena Gruening, James Hunter, Hugh Lort-Phillips, Charles Maugham and Eugénie Parjadis, under the supervision and guidance of Juliet Parker. The report was designed by Kim Winkler.

July 2020

Cover image © Lys Arango for Action Against Hunger
Every day, hundreds of millions of families struggle to deal with hunger. With the COVID-19 pandemic and numerous other shocks affecting communities around the world, global hunger continues to rise. One in nine people is food insecure, and millions more are under threat, with the most vulnerable groups most at risk.

Though our planet produces enough food to feed everyone, progress is too slow – and, in fact, in some places, gains we have made have been reversing. No country is on course to meet all ten of the 2025 global nutrition targets, primarily because of conflict, climate change, the COVID-19 pandemic and economic slowdowns. The world is also behind in meeting the Sustainable Development Goals (SDGs), including SDG 2 which aims to eliminate all forms of malnutrition and achieve zero hunger.

Action Against Hunger’s vision of a world without hunger is an ambitious, critical, and still achievable commitment. Our organisation delivers programmes to meet the growing needs of the most vulnerable people. In 2019 we implemented a record number of projects in the countries most affected by hunger. Our programmes supported more than 17 million people, and provided lifesaving treatment to nearly seven million acutely malnourished children.

For more than 40 years, Action Against Hunger has been a leader on the frontlines, innovating to improve how we treat and prevent malnutrition and scaling up proven approaches. Last year, across 33 research projects, we explored ways to simplify approaches to address and treat acute malnutrition as well as integrate it into health systems, and to put evidence into action through active engagement with key stakeholders. Action Against Hunger influences national and global policies to improve nutrition responses that will lead to sustainable change.

Our interventions focus on delivering lifesaving assistance in hard-to-reach communities where the needs are the greatest. We measure our impact. For example, we saw decreasing rates of child mortality in high-burden areas of Chad and Mauritania. Although we faced challenges with access and insecurity, we quickly and effectively responded to 43 emergencies in 21 countries in 2019. Our in-country teams led the way on emergency response, providing crucial, local experience and expertise. We are grateful to our staff around the world and other humanitarian personnel, who put themselves at risk to save lives and relieve the suffering of people affected by disaster and conflict.

This report measures progress against Action Against Hunger’s International Strategic Plan for 2016–20. On behalf of our nearly 8,500 staff around the world, I am proud to introduce Action Against Hunger’s Global Performance Report for 2019. Despite the challenges we face, we will never give up, until the world is free from hunger.
IN 2019, ACTION AGAINST HUNGER...

- WAS FINANCIALLY SUPPORTED BY >1 M PEOPLE
- RAISED €450.2M REVENUE
- EMPLOYED 8,477 PEOPLE GLOBALLY
- DISTRIBUTED 42.4M CASH
- MANAGED A GLOBAL SUPPLY CHAIN VOLUME OF 146.5M
- CONDUCTED 72 RESEARCH PROJECTS
- RESPONDED TO 43 EMERGENCIES
- REPORTED 10 VERY SERIOUS SECURITY INCIDENTS

WHERE WE WORKED IN 2019

- EXECUTIVE SUMMARY IN NUMBERS

**NUTRITION**
- 5.5 MILLION people supported by our nutrition programmes
- 209 nutrition assessment and surveillance reports
- 210 admissions to CMAM programmes supported by Action Against Hunger
- 642,364 average CMAM cure rate in high burden countries

**HEALTH**
- 19,857 health and nutrition education training sessions
- 2.9 MILLION people supported by our health programmes
- 1,951 health centres
- 288 health and nutrition projects

**MENTAL HEALTH AND CARE PRACTICES**
- 229 Mental health & care practices projects
- 13,112 people received a mental health & care practice kit
- 416,086 people benefited from mental health & care practices
- 88% of individuals who benefited from IYCF received preventative support

**DISASTER RISK REDUCTION AND MANAGEMENT**
- 60 DRR and DRM projects
- 215,666 people supported by our DRR and DRM programmes
- 40,122 people received DRR and DRM training

**WATER, SANITATION AND HYGIENE**
- 6.6 MILLION people supported by our WASH programmes
- 2.6 MILLION hygiene kits distributed
- 13,256 water points improved
- 1.8 MILLION cubic meters of water delivered
- 38.7% of Action Against Hunger projects have a WASH component

**FOOD SECURITY AND LIVELIHOODS**
- 2.4 MILLION people supported by our FSL programmes
- 271,752 people received unrestricted cash
- 252 food security and livelihoods projects
- 18,194 tonnes of food assistance delivered
In 2019, Action Against Hunger continued to provide effective assistance to affected populations around the world. We operated in five countries, delivering assistance in the sectors of nutrition, health, WaSH (water, hygiene and sanitation), food security and livelihoods (FSL), disaster risk reduction (DRR), care practices and mental health.

In all our interventions, we endeavoured to respect our key principles: independence, neutrality, transparency, free and direct access to victims, non-discrimination, professionalism. In 2019, we increased the number of interventions by 38 per cent, delivering 654 projects against 473 in 2018. Overall, 40 per cent of projects implemented were multi-sectoral, having components in health and nutrition, WaSH, FSL, care practices, mental health, DRR, advocacy and food assistance.

Our main objective to address and alleviate hunger brought our actions to reach over 17 million people in 2019, with a slight decrease of 18 per cent compared to 2018. Overall, we reached 40 per cent of the beneficiaries (6,983,097 individuals) in our identified high burden countries2 while 60 per cent (10,453,254) in the rest of the countries where we intervene.

Since 2015, we have been monitoring the indicators of our International Strategic Plan 2016-2020 to reach our intended targets: to reduce mortality in children under 5 years old; reduce the prevalence of chronic and acute undernutrition; increase coverage of programmes to treat severe acute undernutrition; to cover unmet needs within the scope of Action Against Hunger expertise during emergencies and improve programme and strategies on undernutrition.

We contributed to reduce child mortality2 in ten selected high burden countries. In 2019, we provided support to reduce child mortality in Kita (Mali), in Guidimakha (Mauritania), Keita-bouza and Diffa (Niger) and in Borno and Yobe (Nigeria). Such improvements were possible because we increased the number of health and education sessions by 84 per cent, and we increased the number of care practices and nutrition/health projects, respectively by 10 and 24 per cent since last year. In 2019, 6 million people benefitted from our nutrition interventions and almost 3 million from our health support.

We dedicated our efforts to reduce prevalence of chronic and acute undernutrition3 in our programming areas. In 2019, ten out of nineteen districts where we work have already met the reduction target and they are: Diapaga, Fada N’gourma, Est, Bahr El Gazel, Kayes, Kita, Tombouctou, Hod El Charghi, Yobe and Aweil East. To achieve this, Action Against Hunger continued to provide a wide variety of multisectoral programmes to address factors that affect malnutrition prevalence. In 2019, we distributed 18.194 metric tons of food aid and 42 million Euro of cash assistance, we supported over 215,666 people with our disaster risk reduction (DRR) and disaster risk management (DRM) programmes and we reached 5.6 million of people through our WaSH-related interventions with a strong focus in the Middle East.

We worked to increase the coverage of programmes to treat severe acute malnutrition (SAM) to reach our target of 60 per cent by 2020.4

In 2019, only three coverage surveys were completed in two of the high burden countries (in the Guidimakha district in Mauritania and in the Borno and Yobe states in Nigeria), suggesting that those coverage surveys are not prioritised in the monitoring of CMAM programmes. In Guidimakha and MMC/Jere coverage substantially increased while in Central Yobe (Nigeria) the coverage slightly decrease compared to 2018. In terms of CMAM admissions, Action Against Hunger’s country programmes reported a total of 642,000 in 2019. The country reporting the biggest increase in SAM treatment admissions was Pakistan with admissions increasing to nearly 45,000 in 2019, followed by Ethiopia (from 15,000 to nearly 20,000), Central African Republic and Cameroon.

In 2019, across 21 countries, Action Against Hunger responded to 43 emergencies, human-made and natural, demonstrating our comprehensive commitment. In over half of these crises (55.6%), we responded within 72 hours. Approximately 20 per cent of our emergency interventions were dedicated to the West Africa region. The Emergency Pool was deployed 18 times to 12 countries in 2019. These countries included: Cameroon, CAR, Chad, Colombia, DRC, Iraq, Lebanon, Mozambique, Niger, Occupied Palestinian Territory (oPT), Somalia, Sudan, Syria, Venezuela, Yemen and Zimbabwe.

We work in places where the world’s most vulnerable people live and where contexts are particular challenging. In 2019, Action Against Hunger experienced 340 security incidents affecting its staff, a consistent increase from 286 in 2018. A total of ten security incidents were reported to have the highest level of seriousness (level 5), doubling the cases compared to 2018. The most notable increases in security incidents in 2019 occurred in Ethiopia (18 to 45) and South Sudan (12 to 27). To ensure proper management of security, we delivered security training to a total of 1,505 staff.

Logistics and information management systems are key to deliver strong humanitarian aid and development actions. In 2019, Action Against Hunger managed €151.1 million for its logistics and supply chain. Despite a slight decrease in the volume spent in 2018, some countries experienced significant increase as Pakistan (+356%), Jordan (+136%), Iraq (+153%), Yemen (+100%) and Bangladesh (+52%). The utilisation of innovative approaches as per vehicle tracker systems, framework agreements with external services and digitalisation have improved our ways to work and efficiency.

As technical expert and leader in the field of undernutrition, Action Against Hunger continues to put a strong emphasis on research and innovation. In 2019, we conducted 72 research projects, against 25 in 2018, and we ensured an uptake strategy for a quarter of them. Projects were implemented in 33 countries, with a prevalence released in Africa. The increase in the number of projects translated in a growth in the volume of ongoing multi-year research portfolio to €14.2 million compared to €12.9 million in 2018. The collaboration with academic and research institutions as well as a range of non-governmental organisations, public and private institutions and United Nations agencies also continued. In 2019, we collaborated with 58 partners.

Action Against Hunger’s total revenue of €450.2 million in 2019 exceeded all previous records, surpassing the figures in 2018 by €25.7 million. Public restricted fundraising increased overall from 2018 by 7.2 per cent. Unrestricted income remains our largest source of private revenue, comprising 84.0 per cent of private funding (€74.4million) in 2019. In 2019 Action Against Hunger increased the revenue from public restricted funding by €23.4 million over 2018, with total public revenues of €356.4 million. Higher revenue in 2019 allowed Action Against Hunger to deliver 654 projects against 473 in 2018. For every one euro we spent across the network, 86.6 cents were dedicated to programmatic activities.

1 Central America is composed of Nicaragua and Guatemala
2 Burkina Faso, Chad, the Democratic Republic of Congo, Mali, Mauritania, Myanmar, Niger, Nigeria, Pakistan and South Sudan
3 2016-20 ISP target 1: to reduce death rate of children under five years old by 20 per cent by 2020 in our programming areas
4 2016-20 ISP target 2: to reduce both chronic and acute undernutrition in our programming areas by 20 per cent by 2020
5 2016-20 ISP target 3: Our programmes supporting the treatment of severe acute undernutrition will have reached a coverage rate of 60% by 2020
Advocacy is an important tool to change the way hunger and malnutrition are viewed and addressed. In 2019, Action Against Hunger worked with governments to adopt national plans for achieving SDG2.2 on ending malnutrition and the World Health Assembly 2025 health and nutrition targets. We partnered with Save the Children to develop proposals for improving reporting and accountability for upholding UN Resolution 2417 on conflict and hunger. We also strengthened our support and engagement with the Scaling Up Nutrition (SUN) movement and played a leading role in national and regional SUN Platforms, as well as contributed to improving humanitarian access to better protect civilians in conflict situations.

Action Against Hunger attaches importance to collaborate with a diverse range of partners, from national governments to local NGOs, academic think tanks and other international NGOs, to develop effective solutions to tackle undernutrition. In 2019, 98 per cent of our country offices had working partnerships, with 58 per cent of them having a local partnership strategy. This is an improvement from 2018 where only 49 per cent of country offices had a local partnership strategy. We collaborated with government bodies and non-governmental organisations, and we increased the collaborations by 20 per cent since 2018. The main objectives to establish partnerships were to provide capacity building and access to people in need.

Our fundraising and communication activities are essential to support our work and share our vision of a world free from hunger. In 2019, through our fundraising activities delivered across ten countries, income from private sources increased by 12 per cent, from €92 million to €82 million in 2018. This was achieved thanks to the trust of more than 4,700 companies, foundations, restaurants, and schools in our work. Action Against Hunger continues to put communication at the centre, with the aim to raise awareness about hunger and food security and encourage collective actions to eradicate hunger.
This edition of the Global Performance Report (GPR) puts a particular accent on innovation and information management, tools and methodologies that allow Action Against Hunger to be able to respond to immediate needs, to support the decision making process and provide effective and efficient interventions. Action Against Hunger endorse the 2030 Sustainable Development Goals (SDGs) around which the organisation can have a significant impact with its activities. As a leading hunger specialist, we directly contribute toward the achievement of specific goals. Our International Strategic Plan 2016-20 provides a strategic framework and drives our operating model, outlining our vision and guidelines under which Action Against Hunger bases its technical and communicative response, and how it develops interventions in an effective, efficient and timely manner.

Under the guidance of our International Strategic Plan 2016-2010, and based on our Theory of Change, we implement integrated approaches to mitigate the consequences of hunger; address the causes of hunger; change the way hunger is viewed and addressed.

To provide our contribution to the achievement of the SDGs, within our International Strategic Plan 2016-2020, we have set concrete strategic goals with specific targets:

1. Reduce mortality in children under five years old by 20 per cent,
2. Reduce prevalence of chronic and acute malnutrition by 20 per cent,
3. Increase coverage of programmes to treat severe acute malnutrition by 60 per cent,
4. Respond to at least 80 per cent of unmet needs in emergencies,
5. Improved evidence and expertise to support programme countries’ and international community strategies,

Under the guidance of our International Strategic Plan 2016-2010, and based on our Theory of Change, we implement integrated approaches to mitigate the consequences of hunger; address the causes of hunger; change the way hunger is viewed and addressed.

To provide our contribution to the achievement of the SDGs, within our International Strategic Plan 2016-2020, we have set concrete strategic goals with specific targets:

1. Reduce mortality in children under five years old by 20 per cent,
2. Reduce prevalence of chronic and acute malnutrition by 20 per cent,
3. Increase coverage of programmes to treat severe acute malnutrition by 60 per cent,
4. Respond to at least 80 per cent of unmet needs in emergencies,
5. Improved evidence and expertise to support programme countries’ and international community strategies,

Four approaches and tools underpin our vision and strategic goals in order to strengthen our action:

**TECHNICAL EXPERTISE AND INNOVATION**

Our ability to put our technical expertise and innovation into practice.

**OPERATIONAL CAPACITY**

Our capacity to research and identify the most innovative and impactful solutions.

**POWERFUL AND LEGITIMATE VOICE**

Our commitment to use our technical expertise and operational experience to engage and influence a range of stakeholders.

**TRANSFER OF KNOWLEDGE AND EXPERTISE**

The strengthening of the understanding and competencies of societies.

In line with our strong focus on malnutrition we have identified ten countries with a high burden of malnutrition based on their levels of global and sever acute malnutrition. Throughout this five year strategic period we have monitored progress in a selection of districts within these countries where we are operational in order to assess outcomes against our targets. The ten high burden countries are Burkina Faso, Chad, the Democratic Republic of Congo, Mali, Mauritania, Myanmar, Niger, Nigeria, Pakistan and South Sudan7.
INTRODUCTION

**Action Against Hunger Reached Over 17 Million People in 2019**

**KEY GLOBAL STATS**

Action Against Hunger’s ambition of a world free from hunger translates through a comprehensive variety of humanitarian and development interventions, spanning from livelihoods to nutrition, from advocacy to research.

Our actions focus on immediate support to save lives, to prevent the causes of malnutrition, to help to mitigate factors that contribute to crisis, and to deliver development initiatives and sustainable solutions.

This edition of the Global Performance Report includes a detailed overview of the actions and activities implemented in 2019, successes achieved and challenges encountered along the way.

Overall, 40 per cent of the beneficiaries (6,983,097 individuals) were reached in high burden countries while 60 per cent (10,453,254) in the rest of the countries where the organisation operates.

1 Action Against Hunger has detailed guidance for country and regional offices to count people reached. Notwithstanding this, we are aware there may be some discrepancies in the data collection.
In 2019, Action Against Hunger was operational through humanitarian and development interventions in 46 countries across Africa, America, Asia, Europe and the Middle East. Action Against Hunger’s presence in Africa (in 26 countries) continues to be significant due to the vast number of countries in the continent and the enormous assistance required in the regions. However, in the Middle East (in 6 countries where Action Against Hunger was operational) on average the same number of individuals per country was roughly reached (approximately 400,000). It is obvious that there are great differences between countries in Africa, but this assonance shows the importance of Action Against Hunger in the Middle East in the last years in reaching a large numbers of individuals. 40 per cent of projects implemented in 2019 were multi-sectoral, having components in health and nutrition, WaSH, FSL, care practices, mental health, DRR, advocacy and food assistance.

In 2019 Action Against Hunger increased the number of interventions by 38 per cent, delivering 654 projects against 473 in 2018. However, despite the large number of projects delivered, in 2019 the network reached a reduced number of beneficiaries (-18%).

The Action Against Hunger network is governed by a five-year International Strategic Plan (ISP) that provides a shared direction for the 8,000 staff working across our organisation, and informs the strategy and plan of action of our more than 50 offices. Our next International Strategic Plan (ISP3) will set intentions and ambitions of the network for the 2021-2025 period and provide a common roadmap to achieving them.

The development of the ISP3 was kicked off in 2019 by a wide consultation process conducted over a period of several months, which aimed to bring together the views and aspirations of Action Against Hunger’s key stakeholders, including our staff, donors, and partners. The insights gathered from the Mid-Term Review of our previous 2016-2020 ISP have been a key input throughout the development of the new strategy and will continue to inform its operationalisation. This first consultation phase was followed by strategy development workshops.

This participative process enabled the network to identify a number of key priorities, which will continue to be further refined as we finalise the ISP3 over the next few months.

1. WE ENHANCE THE CORE OF WHAT WE DO FOR GREATER IMPACT

While our expertise as an emergency responder and frontliner will remain core to our identity as an organisation, we aim to significantly strengthen our efforts to achieve sustainable long-term change, by putting a greater focus on prevention and on addressing the root causes of hunger.

We know that the climate crisis will be a key accelerating factor in increasing hunger over the next five years. Climate change will not only disrupt local climate conditions and reduce agricultural output, but also have a compounding effect on other drivers of hunger such as conflict and protracted crises, exacerbating existing needs and increasing the pressures facing the most vulnerable populations. This means that we need to fundamentally change the way we address hunger by making this a key focus.

In addition, inequalities in terms of social, political and economic power also remain a key driver of hunger that will be central to our 2021-2025 International Strategic Plan. We believe that the world cannot eliminate hunger without eliminating gender inequality and gender-based violence, since they are both causes and consequences of hunger, and we commit to significantly strengthening our approach in that regard.

Furthermore, the COVID-19 pandemic is reshaping the environment, in which we operate, and is already having a deep impact on hunger and food security, disproportionately affecting the most vulnerable populations. The information and knowledge gathered by our teams as they work to address both the direct and indirect repercussions of this crisis will inform the development of our next ISP.

2. WE TRANSFORM OUR APPROACH AND ACT AS A FACILITATOR AND A CATALYST FOR CHANGE

We know that addressing escalating humanitarian needs will require new ways of working that can produce change on a greater scale, and we will aim to achieve this by rethinking our approach to collective action with our partners and by harnessing the potential of digital transformation. In addition, our recognised technical expertise and decades of experience mean that we are uniquely positioned to mobilise and empower others, and over the next five years, we will aim to maximise our ability to act as a catalyst for change, joining forces with communities, and actors at all levels to achieve unprecedented and sustained gains in the fight against hunger.

To this end, we will work hand in hand with and communities to develop and implement the most effective solutions to prevent and reduce hunger. We will build on our recognised technical expertise to collectively create and share knowledge to empower individuals, communities and actors on a global scale, and leverage our relationships and our global footprint to connect people at all levels to come together and call for change.
1 REDUCTION OF CHILD MORTALITY

Globally, the under-five mortality rate has decreased by 59 per cent8, from an estimated rate of 92 deaths per 1000 live births in 1990 to 39 deaths per 1000 live births in 2018. Despite this progress, child mortality continues to represent a major issue, particularly in some regions of the world.

5.3 million children under age five died (the equivalent of the population of Norway9) in 2018. In at least half of the cases, death is caused by simple diseases treatable through interventions of immunisation, access to safe water, food, appropriate care and adequate nutrition. Among these 5.3 million deaths, 2.4 million were girls and 2.9 million were boys.

The most affected area is certainly the sub-Saharan Africa where women and children face substantially greater risk of dying than in all other regions. Maternal mortality levels are approximately 50 times higher for women in sub-Saharan Africa, and their children are ten times more likely to die in their first month of life than in high-income countries.

Women and children are the most vulnerable during and immediately after delivery. In particular, children face the risk of greater death during the first month, especially if they are born too early, are too small, have complications during birth, have congenital malformations or contract infections. In this scenario, about a third of these deaths occur on the first day, and about three quarters in the first week alone.

To counter this phenomenon and monitor the child mortality rate, Action Against Hunger has set a target to reduce child mortality by at least 20 per cent in the countries in which it operates, and in particular in the identified 10 high burden countries10.

COMPASS OF NUTRITION SECURITY PROGRAMMING:
CASE STUDY: LINK NCA

Link NCA (Nutrition Causal Analysis) is a participatory method developed by Action Against Hunger to identify context-specific causes of undernutrition with the objective to improve and effectiveness of nutrition security programming. The triangulation of data gathered from multiple sources, including secondary data analyses, household surveys, extensive consultations with community members as well as in-country technical experts, allows us to categorize risk factors in order of their effect on the incidence of undernutrition in a given context. This categorisation then allows operational partners to prioritise the interventions, which are best suited to address the problem and/or choose different strategies if identified causal mechanisms differ depending on the nutrition outcome.

In 2019, Action Against Hunger supported nine Link NCA studies across three continents. Seven studies were successfully completed while the remaining two await their completion in 2020. Five studies conducted in Bangladesh, Burkina Faso, Haiti, Madagascar and Pakistan followed a relatively standard methodological pattern, focusing on relatively well defined geographical areas at the level of a health district or refugee settlement. Two remaining studies conducted in Uganda were composite studies covering four districts and/or three regions, respectively, allowing us to test the Link NCA methodology in greater zones.

The meta-analysis of the risk factor categorisation from studies conducted in 2019 showed that low coping capacities were the most recurrent and highly categorised risk factor that year. This means that most programmes designed post-Link NCA exercise would need to address communities’ and households’ resilience and any negative coping mechanisms identified during the study. Their most dominant risk factors include non-optimal infant and young child feeding practices, low availability and/or access to water and non-optimal sanitation practices. While no apparent comparable pattern was detected among these risk factors across diverse settings, all four risk factors were consistently studied in each location. In addition, it is possible to infer that households’ general vulnerability translates into reduced access to basic services and/or optimal child care practices. Collectively, these risk factors cover three major sectors (i.e. Maternal Health and Care, Practices, Food Security and Livelihoods and Water, Hygiene and Sanitation, thus strengthening the evidence about the importance of multi-sectoral interventions to prevent undernutrition.

With the optimisation of the Link NCA quantitative approach in 2018, all studies conducted in 2019 followed an improved methodological guidance, which allowed us to study statistical associations between nutrition outcomes, such as wasting, stunting, underweight and anaemia, and available household indicators. While most studies conducted in 2019 could lean on primary data collection adapted to studies’ needs, the Link NCA study in Uganda used available datasets from previously organised large-scale assessments to run respective analyses.

The comparison of risk factors, which demonstrated a significant statistical association with nutrition outcomes, showed that nutritional status of women is the most dominant protective factor against all nutrition outcomes. Children of well-nourished mothers seemed to be less likely to be wasted in Haiti, Madagascar and Pakistan, less likely to be stunted in Haiti, less likely to be underweight in Bangladesh, Haiti and Pakistan and less likely to be anaemic in Bangladesh. Measles vaccination was observed as the second most dominant protective factor against wasting and anaemia in Uganda and Bangladesh, followed by the utilisation of latrines, which demonstrated a significant protective relationship against wasting, stunting and anaemia in Uganda and underweight in Haiti.

Among the 10 high burden countries, data related to child mortality is available only for African ones. This may indicate that the topic is widely shared and considered an important matter to monitor and analyse, unlike in countries such as Pakistan and Myanmar where child mortality rates possibly remain high but where collecting data is either more complicated or not considered a priority.

In 2019, out of the 12 sampled health districts (in figure 1.1) within African countries, only three have reached their target for 2020 in terms of child mortality reduction (at least 20%). The health districts of Kita (Mali), Borno and Central Yobe (Nigeria) reduced the mortality rate of children under 5 respectively by 0.07, 0.53 and 0.74. With regard to the two latter, located in the north east of Nigeria, it is worth mentioning that they have recorded a reduction in the mortality rate for children under five despite the emergency caused by the Boko Haram insurgency which led to a large number of internal displacements.

To explain such reduction, the NFSS (Nutrition and Food Security Surveillance) round eight document suggests the main guiding drivers. Those might be identified in initiatives related to deworming and administration of vitamin and Micronutrient Powders (MNPs) as well as the high rates of breastfeeding. Conversely, low rates of minimum dietary, frequency and acceptable diet, general food insecurity as well as inadequate coverage for measles vaccination have been recognised as the main aggravating factors for child mortality.

In addition, even though they have not met their targets, the health districts of Guidimakha (Mauritania), Keita-bouza and Diffa (Niger) experienced an improvement compared to 2018, reaching respectively 0.32, 0.18 and 0.46.

Among the health districts monitored within the ten high burden countries, two areas have recorded an exceeding of the emergency thresholds of two deaths in children under five/10,000 children under five/day, in the Logone oriental (5.08) in Chad and the health area of Laboubi in the Democratic Republic of Congo (3.12), triggering an alarm.

The rest of the observed health districts have worsened their situation with regard to the reduction of child mortality, moving away from the desired target for 2020.

Maternal and child undernutrition is a short-term consequence for child mortality. In absolute terms, in 2018, 149 million children under 5 year of age were stunted, 49 million wasted and 40 million overweight.

In order to reduce the risks of child mortality, a particular attention should be paid to the causes of malnutrition, and in particular of undernutrition. In light of this important factor, in the last years, Action Against Hunger has increased the number of Link NCA studies conducted at the country, regional and district level. Only in 2019, 7 Link NCAs were completed and 2 additional were in development almost doubling the effort for such exercises since the introduction of the International Strategic Plan in 2016.

The first 1,000 days of life (from conception to two years of life), characterised as the period in which all forms of malnutrition can find a breeding ground, is the moment of major attention for Action Against Hunger’s interventions.

11 WHO Global Health Observatory
12 Link NCA
13 Five studies conducted in Bangladesh, Burkina Faso, Haiti, Madagascar and Pakistan. In development: Somalia and Uganda.
The integrated actions to support this period are identified in antenatal, natal and postnatal consultations; treatment and referral for integrated community case management (iCCM), provision of zinc and ORS, immunisation, malaria treatment, deworming, and availability of drinking water in the local structures and communities.

In this context, Action Against Hunger operates with multi-sectoral approaches that seek the interactions of interventions that aim to find complementarity in terms of activities and outcomes. In 2019, 261 (38%) of projects were multi-sectoral (see page 22: In Focus, the Emergency Nutrition Programme (PUNC) intervention implemented through a multi-sectoral approach) compared to 165 in 2018.

In 2019, Action Against Hunger reached 2,967,137 beneficiaries with maternal new-born and child health activities (recording an increase of 14 per cent compared to 2018) through primary health care and consultations (antenatal, natal and postnatal consultations) as well as capacity reinforcement for staff of health structures to provide adequate and effective community sensitisation sessions and quality treatments.

With regard to the number of people reached through maternal and child activities, it is indicative to observe how the most significant reduction occurred between 2017 and 2018 and then recorded a slight increase in 2019, suggesting a change in the type of interventions and a greater focus on quality, accountability and research. However, it is also interesting to note that the number of people reached in the rest of the countries in which Action Against Hunger operates has always increased since the beginning of the International Strategic Plan in 2016, indicating a rise in needs and a major focus in contexts outside of high burden countries.

In 2019, Action Against Hunger nutrition interventions reached 5,486,682 individuals, registering a decrease of 11 per cent compared to 2018 (6,147,177). The most significant reductions were recorded in Mali (-87%), Nigeria (-77%), which can be explained by the positive results obtained in the reduction of child mortality. In particular, the evolution of the emergencies in Mali and Nigeria with a potential lost of intensity of the conflicts and the inaccessibility to certain areas (decrease of the number of mobile and satellite teams for treatment, from 260 in 2018 to 210 in 2019) might be considered factors that have influenced the number of people reached.

However, in figure 1.3, the shift in terms of people reached by nutrition and health interventions recorded in 2017, may indicate the increased necessity to respond through SAM and MAM treatment activities.

Despite the overall drop in the people reached in 2019, there is a significant increase in the number of projects delivered, drawing an inversely proportioned trend. In particular, the increase in projects with components dedicated to care practices (activities in TFP and SFP) and health/nutrition (maternal new born and child health) was noteworthy compared to 2018, respectively of 10 per cent and 24 per cent.

However, it is possible to assume that the soft constituents have been privileged at the expenses of treatment and direct activities in order to serve a different range of initiatives through capacity building and support to local structures as well as educational and preventive activities. In this context, a guiding explanation may be found in the increase of health and nutrition education sessions (+ 84%), especially in Mali (6147), Niger (12443), Nigeria (3085), India (5364) and Somalia (30042).
The Democratic Republic of Congo (DRC) is one of the world’s poorest countries, ranked 176th out of 188 according to the Human Development Index (UNDP 2015 and 2016), and has one of the world’s highest undernutrition burdens. One in ten children dies before reaching the age of five in DRC, representing one of the highest rates in the world. Of these deaths, an estimated 45 per cent is due to suffer from malnutrition.

Over the past 20 years, Action Against Hunger has treated severe malnutrition where it is most acute in DRC. We have been sending emergency teams repeatedly to the same areas. The re-occurrence of nutritional crises proves that an emergency intervention alone will not curb the trend of increasing nutrition vulnerability. Action Against Hunger proposed to draw out the modalities of an intervention that can address and strengthen local capacity to respond to malnutrition.

In 2018-19, Action Against Hunger proposed the third iteration of the PUNC (Emergency Nutrition Programme) intervention with the aim to directly respond to the needs related to malnutrition, following the identified priorities of intervention (GAM >10% and/or SAM >2%), considering aggravating factors for prioritisation, and in line with the DRC Wash in Nutrition (WIN) strategy and the National Nutrition Working Plan. The intervention focused on multi-sectoral method driven by a two-fold approach: (i) life-saving intervention in acute nutrition crises; (ii) identifying and analysing the root causes of malnutrition in selected areas where nutritional crises are recurrent.

1. The life-saving approach consisted of
   • conducting diagnostics of the severity of the nutritional situation in the targeted health zones,
   • providing in-kind assistance (Ready-to-use-therapeutic foods (RUTF), medicines and water, sanitation and hygiene (WASH) inputs (WIN kits),
   • delivering regular technical monitoring and hygiene promotion campaigns,
   • facilitating sensitisation sessions on health and hygiene practices, improved food consumption and crop cultivation,
   • and implementing basic rehabilitation of health centres to provide improved services free of charge for the patient as well as supporting training and supervision activities.

2. The supporting modalities to address and strengthen local capacity to respond to malnutrition implied
   • the realisation of a SMART survey with the collaboration of other humanitarian actors, to
     monitor the nutrition emergency contexts and launch immediate responses, and
   • conducting studies (Socio-Economic Analysis and Malnutrition Root Cause analysis) to
     examine market structures and services as well as to understand household level practices and behaviours.

Through the PUNC project (2018-2019), Action Against Hunger has contributed to the prevention of morbidity and mortality linked to acute malnutrition in the DRC with a timely detection and quality treatment of severe acute malnutrition in areas of nutrition crisis for 70,734 direct beneficiaries and 121,320 indirect beneficiaries. The intervention ensured detection and quality treatment of severe acute malnutrition in areas of nutrition crisis for 13,800 patients in six Health zones. Overall, 96 health facilities (centres or hospitals) have improved access to water and hygiene and sanitation, 13,800 patients have received WIN kits for their entire households and the population was sensitised in terms of WASH and IYCF through support groups and other prevention activities.

In 2019, a total of seven SMART surveys and one Socio-Economic Analysis and Malnutrition Root Cause analysis were conducted.
Food assistance includes cash or vouchers, whereas cash corresponds to financial transfers and vouchers are distributed to provide access to goods or services.

Reflecting the wide variety of factors that influence malnutrition prevalence, Action Against Hunger’s programmes are diverse and multi-sectoral. Food security and livelihoods (FSL) is a core feature of our work. Last year there were 252 projects focussed on this sector, an increase of 80 per cent from 2018, when there were 140 FSL projects. The countries which demonstrated the most substantial growth in this area were Colombia and Mauritania, which had an additional 15 and 13 FSL projects respectively in comparison to 2018. Our activities related to FSL capacity building are expanding. In 2019, we delivered FSL training to 179,384 people compared to 136,057 people in 2018. This amounts to an increase of 31.8 per cent. Nigeria, Afghanistan and the Philippines conducted the most FSL capacity building sessions (respectively contributing 34.7 per cent, 8 per cent and 6.2 per cent of Action Against Hunger’s total FSL trainings). As key determinants of malnutrition prevalence, we also promote optimal water, sanitation and hygiene (WaSH) conditions and practices.

There were 278 WaSH projects across Action Against Hunger in 2019. This is an increase of 34.9 per cent on 2018 when there were 206 projects in this area. The Occupied Palestinian Territory (oPT) contributed to this growth: there were an additional 25 Action Against Hunger WaSH projects in this country in 2019 compared to 2018.

Given that undernutrition is unequally distributed across the world, reducing malnutrition prevalence necessitates targeting our resources to high burden countries. Action Against Hunger distributed €25.623,819 through cash and vouchers to the ten selected high burden countries in 2019 which was 60.4 per cent of the cash-based assistance. Moreover, in 2019 45.2 per cent of people supported by our FSL programmes and 40.5 per cent of people supported by our WaSH activities lived in high burden countries.

Action Against Hunger has made progress against its goal to contribute to the reduction of global acute malnutrition20 (GAM) by 20 per cent by 2020. As of 2019, it is estimated that half of the 19 surveyed districts in the high burden countries had already achieved this target. The nine districts where GAM prevalence had decreased by 20 per cent included Diapaga, Fada N’gourma (both Burkina Faso), Kayes, Kita, Tombouctou (all Mali), Guédéma, Hod El Charghi (both Mauritania), Borno (in Nigeria) and Aweil East (in South Sudan). In Mali, the reduction in GAM prevalence has coincided with our long-term efforts since 2015 to build the resilience of rural communities in Kita and Tombouctou. In the latter district we have also piloted capacity building initiatives to strengthen the response of local organisations to the protracted nutritional crisis. The remaining nine surveyed districts have, as of 2019, failed to reach the target set for 2020. In six of these districts, GAM prevalence decreased from 2018 to 2019. Keita-bouza and Mayahi (both in Niger) and Yobe (in Nigeria), the GAM rate is improving but has yet to reach the 20 per cent reduction target. There are two districts which failed to meet the reduction target and experienced an increase in GAM prevalence from 2018 to 2019. They were Bahr El Gazel (in Chad) and Nouakchott (in Mauritania). Finally, there was no survey administered in Kalomba district (in DRC) in 2018. As a result, it is impossible to accurately assess whether SAM prevalence is increasing or decreasing in Kalomba even though it is clear that the district currently falls short of the 2020 target.

SAM prevalence trends in the high burden countries mirror those related to GAM. Ten out of 19 districts have already met the 20 per cent SAM reduction target. They are: Diapaga, Fada N’gourma, Est, Bahr El Gazel, Kayes, Kita, Tombouctou, Hod El Charghi, Yobe and Aweil East. A further five of the 19 districts have failed to meet the SAM reduction target but have experienced a decline in SAM prevalence from 2018 to 2019. These districts include: Kanem, Gao, Guédéma, Nouakchott and Mayahi.

**Figure 2.1:** Value of cash distributed (including vouchers), high burden countries compared to the rest of Action Against Hunger (2018-19)

**Figure 2.2:** People supported by FSL programmes (2015-19)

**Figure 2.3:** Improved water points by region (2017-19)
There are an additional three districts – Bamako, Keita-bouza and Borno – which failed to meet the SAM reduction target and also experienced an increase in SAM from 2018 to 2019. In Borno, this has been caused by an intensification of conflict and instability. Yobe, by contrast, has become relatively more stable since 2016. (As discussed above, there is no 2018 survey for Kalomba.)

Four out of eight of the surveyed districts (50%) have already experienced a reduction of 20 per cent in the prevalence of chronic malnutrition. These areas are Fada N’gourma, Bahr El Gazel, Borno and Yobe. The remaining four surveyed districts have failed to meet the chronic malnutrition 20 per cent reduction target. Guidimakha and Hod El Charghi missed this goal but experienced a decline in chronic undernutrition prevalence from 2018 to 2019. In these two Mauritanian districts the level of stunting has fluctuated in recent years due to varying levels of agricultural production and fluctuations in malaria prevalence. Recent decreases in chronic undernutrition in the districts may be a result of Action Against Hunger introducing integrated community case management (iCCM) and widening the coverage of its malnutrition programmes. In Kanem and Est there was an increase in stunting prevalence over the last year.
3 SCALING UP TREATMENT OF SEVERE ACUTE MALNUTRITION

The third of the International Strategic Plan’s goals is to increase the coverage of Action Against Hunger’s programmes to treat severe acute malnutrition (SAM) in the high burden countries. Progress on this goal is measured by two indicators:

1. In the health districts supported by Action Against Hunger in the 10 high burden countries, to increase treatment coverage of SAM to at least 60 per cent by the end of 2020.

2. To contribute to advocacy to increase the number of severe undernourished children accessing treatment globally to 6 million by the end of 2020.

Progress on the first indicator is measured through coverage surveys. During 2019, only three coverage surveys were completed in two of the high burden countries (in Gudimakha district in Mauritania and in Borno and Yobe states in Nigeria). This is a reflection of the fact that coverage surveys are not prioritised in the monitoring of CMAM programmes despite being the only way to effectively assess if the needs of acutely malnourished children are covered.

In Gudimakha in Mauritania, treatment coverage was reported to have increased from 49 per cent in 2018 to 58 per cent in 2019. The programme therefore is close to exceeding the target ISP’s coverage figure of 60 per cent. In Nigeria, treatment coverage in Central Yobe local government area (LGA) reduced from 61 per cent in 2018 to 40 per cent in 2019. Meanwhile in the wards in MMC/Jere LGA where it was secure enough for Action Against Hunger’s team to support CMAM activities, coverage was reported to have increased from 41 per cent in 2018 to 98 per cent in 2019.

In the absence of coverage surveys, indirect indicators such as admissions to SAM treatment programmes and programme exit criteria can also be used to indicate progress on scaling up treatment of acute malnutrition. However they should not be used on their own without a wide understanding of the context and of the factors that are likely to impact coverage.

In 2019, UNICEF reported that global admissions to SAM treatment programmes were 4.9 million (a slight drop compared to 5.2 million in 2018). Of these, Action Against Hunger’s country programmes contributed 307,000 admissions which represents a 25 per cent drop (100,000) compared to the 2018 reported admissions.

While there is a reduction in admissions in some countries, the overall drop masks increases in admissions in other countries. Despite a drop of more than 35,000 admissions compared to 2018, Action Against Hunger Nigeria reported the highest SAM treatment admissions in 2019 with a total of 57,000. The reduction is attributed to the forced closure of Action Against Hunger’s programmes in Northeast Nigeria for six weeks.

The country reporting the biggest increase in SAM treatment admissions was Pakistan with admissions increasing from 7,700 in 2018 to nearly 45,000 in 2019. The increase was due to the launch of a new project and the continuation and scale up of a project in Sindh province. Other countries reporting significant increases in SAM treatment admissions included Ethiopia (from 15,000 to nearly 20,000), Central African Republic and Cameroon.

When admissions to “curative nutrition supplementation” (MAM treatment) are combined with SAM treatment admissions to get a total for CMAM admissions, total reported admissions in 2019 were 642,000. This compares to 728,000 admissions in 2018 which was the highest ever reported by Action Against Hunger’s country programmes.

This impressive increase indicates improvements in community outreach in the LGA and in community acceptance of the programme. However it is important to emphasise that the estimate is not reflective of the whole LGA.

This impressive increase indicates improvements in community outreach in the LGA and in community acceptance of the programme. However it is important to emphasise that the estimate is not reflective of the whole LGA.

Figure 3.1: SAM admissions by country (2018-19)

Note: Average cure rate for 18 countries which reported SAM performance data. Cure rate is weighted based on total SAM admissions.

Progress on the second indicator is reported in Chapter 9.
Approximately half of all MAM treatment admissions were reported by the Ethiopia and South Sudan country offices (118,000 and 53,000 respectively).

Out of the 32 countries that reported SAM treatment admissions, only 18 reported programme performance data (combined for all SAM treatment programmes in the country). Of those that reported, the average cure rate (weighted based on number of admissions) was 94 per cent. This was an increase to the average cure rate in 2018 when the average was reported as 86 per cent.

Most countries reported a cure rate greater than 75 per cent (the Sphere standard for CMAM cure rate) however three countries (including India, Ivory Coast and Senegal) reported cure rates lower than 75 per cent. The reasons for the low cure rates in these countries is not known however the total number of admissions across those 3 countries was relatively low (1,700).

During 2019 Action Against Hunger’s teams around the world undertook a range of research studies to test and examine the feasibility of improving the effectiveness and efficiency of the diagnosis and treatment of acutely malnourished children. This year’s Research Review focuses on key findings from Action Against Hunger’s research projects on the treatment of acute malnutrition which have been operational in recent years.

These include integrating the treatment of acute malnutrition into integrated community case management (iCCM) in various countries in Asia and Africa, reducing the dosage of Ready-to-use Therapeutic Food (RUTF) for children with SAM in a food secured context and combining treatment of severe and moderate acute malnutrition with a reduced and simplified dosage of ready-to-use food. The Research Review also presents the important steps taken to integrate research findings into Action Against Hunger’s programming. Many of the research projects were coordinated by the No Wasted Lives coalition which continued to be led by the Action Against Hunger team in London.

Figure 3.2: Average cure, mortality, defaulter and non-response rates for selected Therapeutic Feeding Programmes (TFP)

Note: Rates correspond to TFP, which provide treatment to children affected by severe acute malnutrition. The seven high burden countries that reported data for 2019 are included (Burkina Faso, DRC and Myanmar did not report TFP performance rates in 2019). The non-response rate (i.e. the percentage of cases which are discharged from the programme as they do not respond to treatment) is calculated as the residual of the sum of the rates reported for cure, mortality and defaulter. In some instances, it may include cases which have been transferred to other programmes.
OVERVIEW

Since 2015, Action Against Hunger’s team in Madrid has been developing the “SAM Photo Diagnosis” app to provide governments and humanitarian agencies with a tool that identifies acutely malnourished children based on a photo of their left arm. The app aims to provide a real-time and systematic diagnosis, making it ideal for community-level and survey use.

By using the app, health workers and volunteers will be able to avoid the current challenges encountered with the diagnosis of acute malnutrition, particularly in the community. Weight-for-Height z-score (WHZ) and Middle Upper Arm Circumference (MUAC) are the two approved methods of diagnosis in use at the moment. WHZ requires testing for presence of bilateral pitting oedema is also used. However since oedema search is the first step in the acute malnutrition diagnosis protocol, the SAM Photo Diagnosis app starts working after the screening for oedema has resulted negative (if positive, the child is considered SAM with complications and referred immediately to health facilities).

health workers and volunteers to carry cumbersome equipment during screening. Moreover, the lack of proper training and/or experienced professionals leads to errors in measurement and interpretation of z-scores, resulting in misdiagnosis. MUAC tapes are easier to carry and use, however errors in measurement are still common (especially in younger children). Scientific studies have also demonstrated that not all children suffering from acute malnutrition can be identified using MUAC and WHZ and that each method can identify different children.

The SAM Photo Diagnosis smartphone app avoids these challenges by using morphology (the study of shapes) to identify acutely malnourished children aged 6-59 months in real time, without the need for internet. The app has the potential to greatly improve the accuracy of diagnosis as well as the efficiency and cost-effectiveness of screening and surveys. The app also avoids the need to take a photo of the child’s face (unlike technologies being developed by other organisations).

By speeding up the diagnosis of acute malnutrition at community level, the app will result in malnourished children being identified earlier in the progression of the disease, thus increasing the chance of successful treatment and reducing time in treatment. This is likely to improve the perception of treatment in the eyes of the community. In addition, if location data collected by the app are shared in real-time at national level, ministries of health will be able to identify malnutrition “hot spots” and take timely action to support sub-regional health structures.

CURRENT STATUS AND NEXT STEPS

Since October 2018, the Action Against Hunger Spain team have been implementing a validation phase to test the App in Senegal. Data collection will continue until March 2021 during which time data will be collected from 1800 children to improve the accuracy of the classification algorithm. During this stage of testing, the four nutritional status groups addressed by WHZ and MUAC are being considered for inclusion in the app including: 1. Severe Acute Malnutrition, 2. Moderate Acute Malnutrition, 3. At risk of Acute Malnutrition, 4. Optimal nutritional condition.

In order to support future scale-up and use in programmes across different populations, a final stage of technological development, validation and refinement is needed to adapt the app to its end-users: Community Health Workers and Volunteers. This will involve a user-centred design study with community-based nutrition workers and with key community members. Eventually, therefore, it could be possible for community members to use the app to monitor the health of their own children. To complete this important stage, the team in Madrid is currently looking for new sources of funding.
Emergencies are central to the identity of Action Against Hunger. There are 131.7 million people in 42 countries across the world that need humanitarian assistance. A further two billion people live in fragile or conflict affected regions which are vulnerable to disaster and crisis. The Action Against Hunger network provides a rapid and localised response to meet the needs of those affected by humanitarian emergencies (see focus item on page 36).

As part of our International Strategic Plan 2016-2020, we are committed to ensuring that ‘unmet needs within the scope of Action Against Hunger’s areas of expertise will be covered during emergencies’. Specifically, we have three emergency targets:

1. At least 80 per cent of rapid and slow onset emergencies will have a positioning and programming strategy;
2. At least 80 per cent of rapid and slow onset emergencies are appropriately responded to within 48 hours;
3. 100 per cent of emergencies where unmet needs are identified and are beyond Action Against Hunger’s support capacity will have developed an advocacy strategy aimed at improving the coverage of needs.

In 2019, Action Against Hunger responded to 43 emergencies. In over half of these crises (55.6%) we responded within 72 hours.

The majority of our emergency response activities are targeted at human-made emergency crises. We responded to 24 emergencies that were the direct result of conflict and ten complex emergencies (defined here as conflict exacerbated by other factors such as famine). In 2019 the network responded to rapidly deteriorating conflicts in the border region of Burkina Faso, Niger and Mali and in the Anglophone regions of Cameroon. We also continued to provide emergency support to populations affected by protracted conflicts in Afghanistan, DRC, Lebanon, Nigeria, Occupied Palestinian Territory (oPT), Syria, Venezuela and Yemen.

In addition to our emergency response activities in conflict contexts, we responded to nine natural disasters in 2019. This included support to populations affected by the Mindanao earthquake (the Philippines), El Niño drought (Madagascar) and Cyclone Ida (Mozambique and Zimbabwe). We also assisted in the following flooding-related emergencies: Bangui (CAR), Freetown (Sierra Leone), Sud-Ubangi Province (DRC) and White Nile (Sudan).

The geographic scope of our emergency responses is becoming more focussed. In 2019 we provided emergency support to 21 countries. This is a decrease from 26 countries in 2018.

Nearly a third (32.6%) of Action Against Hunger emergency initiatives in 2019 targeted Central Africa. In total, we launched 14 separate responses in this region. We were particularly active in CAR and DRC. In these countries we responded to epidemics such as Hepatitis E and Ebola, provided water, sanitation and hygiene (WaSH) support to internally-displaced people (IDPs) and strengthened infant and child care services.

We also conducted ten emergency responses in East Africa. We initiated multiple initiatives in response to crises in Somalia. Unconditional cash transfers were a core feature of our emergency work in this country. This modality was used to support 3,399 households affected by drought, 1,243 household affected by conflict and 761 household affected by flooding.

Approximately 20 per cent of Action Against Hunger’s emergency work was dedicated to West Africa in 2019. We responded to eight emergencies in this region. After an intensification of Boko Haram-related armed violence in northeast Nigeria, we provided emergency food security, WaSH and non-food item (NFI) support to IDPs and other conflicted affected communities in Borno and Yobe States.

The remaining quarter of our responses to crises were split between Asia, the Americas and the Middle East and North Africa (MENA). Overall we initiated 11 emergency responses across these three regions.

The Emergency Pool was deployed 18 times to 12 countries in 2019. These countries included: Cameroon, CAR, Chad, DRC, Iraq, Mozambique, Niger, Somalia, Sudan, Venezuela, Yemen and Zimbabwe. Though the majority of emergency responses are carried out by in-country teams, at times additional capacity is required. In cooperation with the in-country teams and adapting to the ongoing activities in the country, surge staff support the quick and effective response to emergencies as well as preparedness activities.

The average length of an emergency response is 208 days. However, the average duration of emergency activities varies significantly for different crisis types with responses to human-made crises spanning the largest time scale. On average, our response to conflict-caused emergencies lasted for 215 days. The equivalent period for a natural disasters was 138 days.
IN FOCUS

ACTION AGAINST HUNGER’S EMERGENCY RESPONSE PREPAREDNESS

13 Action Against Hunger country offices devised Emergency Response Preparedness Plans in 2019. They were Afghanistan, Burkina Faso, Cameroon, CAR, Chad, Iraq, Jordan, Liberia, Madagascar, Myanmar, Nepal, Pakistan and Sierra Leone.

Action Against Hunger’s approach to emergency response preparedness planning is intended to strengthen localisation and country-level capacity. The new plans also outline meaningful emergency response goals and the strategic response capabilities needed to ensure effective and timely action. When disasters occur, local teams are now able to initiate their response immediately by using pre-existing partnerships with local actors and vendors. This improves upon the traditional humanitarian model relying on international responders as well as eliminating the possibility of having staff, goods and equipment denied entry into the affected country.

Developing an Emergency Response Preparedness Plan starts with Action Against Hunger conducting a preparedness mission. Each plan consists of the identification of threats as well as at-risk populations and defines annually the relevant readiness activities to be implemented. Due to the episodic nature of risks as well as the rapid changes in the contexts, each Emergency Response Preparedness Plan should be updated every 6 to 12 months. The mission lasts for approximately two weeks and is led by a preparedness coordinator.

Local organisations included in our emergency response planning are public, health and government authorities, the private sector, other international NGOs and local civil society organisations. For Action Against Hunger, building and maintaining these partnerships are an integral part of our 2020 strategy.

Having country teams better prepared for disasters aligns with the recent research conducted by Action Against Hunger, HELP Logistics and KLU which confirmed that for every dollar invested in preparedness seven dollars can be saved in response. The better Action Against Hunger is prepared, the more effective we can be not only in response cost efficiency, but also in saving lives and reducing suffering.

Supply chain is a key component reflected in the preparedness and response planning that enables country offices to define strategies to improve their logistics capacity. The planning process also encourages reflection on the most efficient approach to supply chain in country to ensure timely and adapted responses. Whether it is going to be by fostering framework agreements, emergency agreements with donors and the UN system, maintaining local contingency stocks for the very first days of a response, looking at access and transportation constraints: these are some examples of the strategic discussions made in country during the planning process, and supporting country offices to strengthen their local supply chain capacity to deal with emergencies.

Emergencies require training and knowledge on how to respond. In 2019, Action Against Hunger began to harmonise and develop training to build the capacity of our staff and partners. Last year we piloted our EM101 training in five countries. The purpose of this course is to enhance emergency management knowledge and enable our teams to promptly respond to emergencies while training them on best humanitarian practices. Other technical trainings related to emergencies will be developed in the coming years.

At a global level, Action Against Hunger has existing and ready-to-deploy emergency teams, supported by international surge logistics capacity that includes prepositioned contingency stocks and worldwide stand-by agreements with several humanitarian and private partners and a strong involvement with the global logistics cluster. We are also part of the Nutrition and WaSH Rapid Response Teams.

Having this global network is, however, insufficient on its own to respond rapidly to humanitarian crises. At the country level, Action Against Hunger has an extensive field presence. With Emergency Response Preparedness Plans, local teams are able to initiate the response immediately. Being better positioned locally increases our ability to attain the ISP goal of responding to 80 per cent of emergencies within 48 hours.

HUMANITARIAN CRISIS IN NIGERIA

The large scale humanitarian crisis in the north east of Nigeria entered into its eleventh year with the Borno, Yobe and Adamawa states being the most affected. In 2019, Nigeria witnessed a deteriorating situation characterised by a shrinking humanitarian space. Increasing attacks on communities, security incidents, attacks on Action Against Hunger staff as well as new strategies deployed by the military, had implications on humanitarian interventions.

Aid delivery has been slowed down in the region. Non-state armed groups increased their attacks even in the rainy season, a dynamic shift from previous years. New areas have become inaccessible and illegal road checkpoints were set on major roads in north east Nigeria. This led the humanitarian actors to change their operation modalities. Action Against Hunger, along with other humanitarian partners, are currently delivering interventions mostly in areas where helicopter movement is possible and in locations where it has a presence. Action Against Hunger continues to provide life-saving services in several out-of-reach areas by implementing remote management. In the near future, other options will be explored, including increased collaboration with local partners. The ultimate goal is to ensure that the population is not cut off completely from essential services.

These changes in the humanitarian context led to a significant increase in humanitarian needs and protection risks throughout 2019. Across the three states, about 1.2 million people are currently out of reach for humanitarian actors and deprived of much needed assistance.
5 SECURITY

Against Action Against Hunger operates in a number of challenging contexts including war zones, natural disaster-prone areas, other situations of violence and regions under the control or influence of terrorist groups. We work in places where the world’s most vulnerable people live. The mitigation of security incidents that have potential to harm Action Against Hunger staff is a priority for the network. This is why we have two security related indicators in our International Strategic Plan 2016-2020:

- Number and nature of security incidents per country
- Level of insecurity per country of intervention

In 2019, Action Against Hunger experienced 340 security incidents affecting its staff, an increase from 286 in 2018. The increase could be explained by the SIRO platform being used by missions with more efficiency. As was the case in 2017 and 2018, seven countries accounted for half of the security incidents experienced in 2019 (Ethiopia, Lebanon, Occupied Palestinian Territories, South Sudan, Afghanistan, Yemen, Central African Republic). Compared to 2018, in 2019 there was a decrease in the number of security incidents in 16 countries while there was an increase in security incidents in 19 countries. The most notable increases in security incidents in 2019 occurred in Ethiopia (18 to 45) and South Sudan (12 to 27). Ethiopia reported the highest number of incidents in 2019, while Lebanon was the second one (29 incidents), Ethiopia’s rise of Ethnic clashes, civil unrest, countrywide internal border demonstrations and political reforms caused this incident spike. The country with the greatest increase in security incidents in 2018 (Afghanistan, 37 incidents) saw a significant reduction in the number of incidences occurring in 2019 (37 to 14), which was the most notable decrease in security incidents that occurred in 2019, followed by Madagascar (16 to 7).

A total of ten security incidents were reported to have the highest level of seriousness (level 5) in 2019, up from five incidents in 2018. They included the killing of two Ethiopian field staff in Gambella base by armed ambush, which was a real cause for concern. Likewise, four crisis management cells were opened by the France HQ, two in Nigeria (kidnapping and close of offices by the army), one in Burkina Faso (kidnapping), and one in Madagascar. Six countries which had no level 5 incidents in 2018 had two (Cameroon) or one (DRC, Ethiopia, Lebanon, Madagascar and Mali) level 5 incidents in 2019. The number of security incidents reported with the second highest level of seriousness (level 4) fell to 19 in 2019, down from 33 in 2018. Overall, 71 incidents level 3-5 were reported in 2019, down from 125 in 2018. The countries which had the highest number of levels 3-5 incidents in 2018 were as well the countries where the decrease of levels 3-5 incidents was most significant in 2019 (Lebanon from 25 to 3, OPT from 17 to 0, Afghanistan from 15 to 6, Philippines from 11 to 4). Furthermore, Yemen and Cameroon had the highest increase of levels 3-5 incidents, each with five additional levels 3-5 incidents. On the other hand, the number of reported incidents below level 3 has significantly increased with 215 incidents in 2019, up from 151 in 2018 and 159 in 2017.

Traffic accidents were the most common security incident faced by Action Against Hunger staff in 2019, with 64 incidents. This was consistent with 2018 (70 incidents), 2017 (52 incidents) and 2016. The countries with the largest number of traffic accidents were Ethiopia (8 incidents), followed by

Cameroon, Lebanon, Kenya, South Sudan and Central African Republic (5 incidents each). This is coherent with global data as Ethiopia has one of the worst rates of traffic fatalities in the world. Traffic accidents’ causes are numerous and include exogenous ones (poor infrastructure, meteorological conditions, driving skills) and endogenous (laxity on Action Against Hunger driving rules). Nigeria saw a decrease of incidents between 2018 (highest number, 9 incidents) and 2019 (1 incident).

External abuse of power targeting our staff/teams was the second most common security threat, with 39 incidents of this category recorded in 2019. It covers requests from security forces to be transported in Action Against Hunger vehicles, prevention by authorities to access an operational area, administrative constraints for our interventions, attempts at bribery, and extensive pressure to get people registered in programmes. 22 of these incidents occurred in Occupied Palestinian Territory, and 6 in Venezuela.

Figure 5.1: Security classification and number of security incidents, by country where Action Against Hunger works (2019)
The third most common security threat is threat/s by individuals external to the organisation with 31 incidents in this category in 2019. They were recorded mainly in Yemen (6 incidents), Lebanon (5 incidents) and Afghanistan (4 incidents).

Action Against Hunger provides security briefings and related training (HEAT, HEIST, HEPAT (HEAT + First Aid), PFST, UNDSS SSAFE Training where other trainings were not available) needed to contextually orient and adapt staff who travel and work in high risk areas. Safety and security trainings include methods for both prevention and response to security incidents, as well as first aid training. Overall, the number of Action Against Hunger staff who attended a security training decreased slightly from 2018 (1,694 staff) to 2017 (1,497 staff). Spain was the country with most staff trained in 2019 (1,694 staff), followed by Ethiopia (1,142 staff) and Syria (114 staff). Action Against Hunger staff who attended a security training decreased slightly from 2018 (1,694 staff) to 2017 (1,497 staff). Spain was the country with most staff trained in 2019 (1,694 staff), followed by Ethiopia (1,142 staff) and Syria (114 staff). Action Against Hunger has now trained 5,001 current and former staff worldwide on security and first aid.

Security benefitted from a significant increase of resources in 2019. Additional positions at HQs’ Security Units’ level as well as country level. The Action Against Hunger network International Security Group amended their terms of reference at the end of 2019. Safety and Security Audits continue to play an important part of developing minimum structural standards and ensuring both capacity development of heads of bases of country security teams.

Each country where Action Against Hunger operates is given a security classification ranging from green to black. In 2019 as in 2018, two countries were classified as Black: Somalia and Syria. Both contain areas dominated by active insurgency, armed conflict, other situations of violence, restricting travel and acting as an ever-present threat to staff. The classification with most countries is yellow (19 countries). Additionally, 24 countries were classified as high (orange, 10 countries) or very high (red, 14 countries), up from 22 in 2018. The number of countries with a low security classification (green) increased from two to three. Spain and Tanzania remained green, while Cambodia was classified back as green, as it was yellow in 2018 and green in 2017.

Logistics and information managements systems are fundamental to deliver humanitarian and development actions. Action Against Hunger considers it essential to focus on quality, timely and effective processes to support the operations. The logistics system is composed of several components which support the daily management. It mainly concerns procurement and supply chains, premise and fleet management, including the selection of vehicles and equipment, the procedures necessary to establish, manage and monitor a fleet of vehicles, ensuring that systems and procedures follow safety and legislative requirements. It also includes the development of skills and competences to guarantee proper supplies for operations; access to energy in remote areas; provide energy devices (generators, solar panels, inverters, etc.); to replace and anticipate the needs of the equipment; waste management; establish operational rapid response mechanisms.

In 2019, Action Against Hunger spent €146.5 million through its logistics and supply chain, recording a slight decrease of 3 per cent compared to 2018. The volume was shared by 46 Action Against Hunger operational country offices, three regional offices (Middle East, East and West Africa), as well as seven logistics centres (in Accra, Barcelona, Dubai, Lyon, New York, Panama, and Paris).

In terms of supply chain volume, country offices that experienced a significant increase in 2019 were Pakistan (+356%), Jordan (+136%), Iraq (+153%), Yemen (+102%) and Bangladesh (+52%).

Overall, the expenditure followed the reduction trend started in 2017, when the volume was of €177.9 million. The 2019 decrease can be explained with the restriction in movements and marge de manoeuvre limitations of Action Against Hunger in some emergency contexts like Nigeria (-10% compared to 2018), Ethiopia (-29%), Syria (-35%), South Sudan (-39%), Mali (-77%). The trend in reduced overall volume from 2017 to 2019 can also partly be attributed to the closure of offices in Malawi and Egypt.
In 2019, thirty country offices utilised Action Against Hunger’s Logistics Assessment Tool (LAT™), scoring an average completion rate of 70 per cent (69% in 2018). The tool provides an assessment of the implementation of standardised logistics processes and tools, using 19 indicators that give guidance to our logistics teams on current performance. The average completion rate recorded a slight improvement compared to 2018. The increase can be attributed to the high scores recorded by Kenya (90%), South Sudan (93%), Syria (89%) and Colombia (86%) country offices.

Twenty-five country offices reported using vehicle trackers last year, against sixteen in 2018. Action Against Hunger has been progressively deploying trackers to save costs by monitoring vehicle movements in real time. In 2019, on average 57 per cent of vehicles were tracked in countries adopting tracking devices (in 2018, 25%). Jordan, Kenya and Nigeria country offices reported the track of all their vehicles.

The supply management also benefited from positive results in terms of timely delivery of orders. In fact, in 2019 the percentage of timely orders delivered in 22 country offices was 64 per cent, with an outstanding score for Niger (85%), Senegal (89%), Georgia (96%) and Guatemala (87%).

Only seven country offices reported on positive perception rates in 2019 with an average of 76 per cent. The weak participation to this indicator was due to the difficulty in conducting a Log satisfaction survey. Despite challenging factors and the tenuous representativeness, the positive perception increased by 6 per cent points.

In 2019, some country offices were virtuous in terms of logistical changes and improvements. The office in Kenya increased the number of signed framework agreements by 20 per cent compared to 2018, and South Sudan placed 24 framework agreements that helped to reduce late/last minute budget spending and contributed to quality and timely programme delivery. The digitisation of processes has also allowed working online with taxi service providers, enabling the country programmes to save on taxi costs (e.g. Kenya).

The Logistics Assessment Tool comprises 11 main indicators and eight transversal indicators, including indicators on project cycle management, procurement, energy, audit and financial risk control.

In 2019, the Réseau Logistique Humanitaire (Humanitarian Logistics Network - RLH), an alliance composed of several international humanitarian organisations, including Action Against Hunger, presented a paper with the aim of outlining important areas of work orientated towards collaborative practices.

Efficiency improvement and cost effectiveness is at the heart of the RLH’s mandate. The idea behind the paper was to provide a potential response to the funding gap in the humanitarian sector as in 2018 only 60 per cent of humanitarian needs were covered (with a funding gap of almost 10 billion dollars in humanitarian response plans).

The report is based on an assessment of logistics practices in the humanitarian sector and considers progress in the private sector. The analysis showed that practices need to be further developed in the humanitarian sector, as well as a need to increase collaboration among organisations and thereby optimise existing resources. Those practices might optimise the use of resources, enhance the quality and efficiency of logistics services across the sector.

The paper was presented in some of the main forums such as the Global Logistics Cluster, Humanitarian Network Partnership Week, Forum Espace Humanitarian and ECHO Brussels with the aim of sensitising and promoting a political reflection.

Following this publication, the RLH members launched a study to identify the opportunities to scale up the pooling of resources, such as procurement, through a dedicated structure. The results will be presented early 2020.

The Réseau Logistique Humanitaire (Humanitarian Logistics Network - RLH) is a consortium created in 2014. Its main objective is to optimise humanitarian logistics and improve operational efficiency by developing a common strategy of resource sharing, advocacy and information sharing. The RLH currently consists of eleven international humanitarian organisations, represented by their respective directors and logistics managers. It is also a forum for sharing knowledge and best practices concerning humanitarian logistics.
To support the Logistics system, information management and technology needs to be integrated within the established work processes to provide timely access to comprehensive, relevant, and reliable information. The main phases composing the information management system are information capturing, transmitting, storing, retrieving, manipulating and displaying. Information management can also support wider programmatic needs, as per Monitoring, Evaluation, Accountability and Learning (MEAL) and Nutrition activities.

The Information System tool 'LINK', utilised in the majority of our countries of operation, welcomed over 1,200 simultaneous users in 2019. Last year was also important for the expansion of its functionalities, in particular with regard to the development of the Stock Management module, as well as the launch of an inter-NGO platform project. The sharing of this platform will allow users to pool the costs of using the tool and to develop new functionalities, opening the possibility for carrying out joint purchasing and logistics operations.

Information management plays a fundamental role in relation to MEAL. In 2019, 82 per cent of the country offices utilised a digital tool (ODK, KOBo toolbox, Commcare, DHIS2) to conduct data collection in the majority of the projects implemented, supporting the change toward a digitisation process.

Action Against Hunger, through its specific focus on hunger eradication and nutrition, implement nutrition information systems designed to continuously collect, analyse, interpret and share nutrition-related data.

Information systems are critical for managing and organising daily activities as well as responding to new emergencies through early warning and preparedness schemes. In particular, these systems inform decision-making on transport, supply chain management, resource mobilisation, programming, monitoring, evaluation, and assessment. They promote information creation and enable sharing mechanisms within and among humanitarian actors.

In several countries, Action Against Hunger act a lead organisation in the Logistics Cluster promoting lessons learnt and facilitating the conversation among humanitarian, development and governmental actors (e.g. in South Sudan, Uganda). The participation in Logistic clusters allows Action Against Hunger to provide coaching and mentoring and training initiatives (Advanced Humanitarian Logistics, Basic Humanitarian logistics course, Logistics cluster induction, dangerous goods awareness course, Warehouse management training) to benefit the staff of the partners organisations (e.g. 50% of Action Against Hunger staff in South Sudan received training).

Nutrition information systems play a key role for targeted action in population, nutritional health and food insecurity. In more detail, nutrition information supports measuring changes in the nutrition status of vulnerable people, namely women and children, tracking progress in the implementation of actions, helping the prioritisation of responses. Nutrition information assists in decision-making on policy and nutrition programme design, legislation, channelling of resources and implementation.

28 In 2019, Action Against Hunger signed a partnership with Handicap International to allow the access to the tool.

29 Nutrition information systems play a key role for targeted action in population, nutritional health and food insecurity. In more detail, nutrition information supports measuring changes in the nutrition status of vulnerable people, namely women and children, tracking progress in the implementation of actions, helping the prioritisation of responses. Nutrition information assists in decision-making on policy and nutrition programme design, legislation, channelling of resources and implementation.
7 RESEARCH, INNOVATION AND LEARNING

Action Against Hunger is a leader in technical expertise and innovation in the field of undernutrition. Our International Strategic Plan 2016-2020 outlines our commitment to research, innovation and learning in our operations, and to ensuring that all research projects strengthen practical approaches to prevent and treat undernutrition. This chapter highlights our progress towards the achievement of our research, learning and innovation targets, and our Research Strategy 2016-2020. The research strategy has three strategic workstreams:

- Prevention of undernutrition
- Treatment of undernutrition
- Effectiveness of humanitarian assistance and emergency response

In 2019, Action Against Hunger conducted 33 research projects. The number of research projects that we conducted as well as the overall financial volume increased compared to 2018. Our projects span our operational sectors and countries, where we collaborate with a variety of donors and partners to produce the results needed to deliver evidence-based interventions.

We conducted research projects in 25 countries, the most common of which were Senegal and Mali, with five projects each. For an example of one of our research projects conducted in both these countries, see the case study on the ICCM+ project. The majority of our research projects were conducted in countries in Africa (73% or 24 projects in 17 countries). Our research presence in Latin America doubled compared to 2018 with 4 projects in 2019 in Colombia, Guatemala, and Haiti. The number of projects did not change in the remaining areas in Asia (4 projects in Nepal and Bangladesh), the Middle East (2 projects in Iraq), and Europe (1 project in Spain). For a full list of our research projects please see Annex 2.

In line with Action Against Hunger’s technical expertise and experience, 82 per cent of our research projects have a nutrition component. Similarly, the majority (67%) of single-sector projects were nutrition focused. Three quarters of our projects were multi-sectoral, addressing research gaps in health, mental health care practices and water, sanitation and hygiene to name a few. The least frequently researched thematic sector is disaster risk reduction and disaster risk management, in which we only have two projects.

The total value of Action Against Hunger’s ongoing, multi-year research portfolio is €14.2 million, an increase from €12.9 million in 2018. Of this total budget, €3.8 million was for activities in 2019, up from €3.1 million in 2018.

In 2019, we collaborated with 58 partners on our research projects. Academic and research institutions continue to be our most common partners, collaborating with us on 88 per cent of projects. As part of our work with academic institutions, we supported 13 graduate degrees across 12 research projects. We also partnered with a range of non-governmental organisations, public and private institutions and United Nations agencies. Our donor portfolio has also increased; in 2019 we received support from 21 donors, up from 17 in 2018 and ten in 2017.

One quarter of our research projects have a fully developed and funded research uptake strategy. The total number of projects with a fully developed (but unfunded) uptake strategy remained similar at 70 per cent. Progress in this area must become an organisational priority to ensure we proactively include research uptake in all proposals, and advocate for and secure funding for uptake activities.

We produced 19 publications linked to our research projects. One third of these publications were peer reviewed, and all of these articles are published in open access journals. For a full list of our research publications please see Annex 2.

Action Against Hunger continues to prioritise learning and innovation in all that we do. The International Strategic Plan 2016-2020 highlights the importance of making learning a core part of Action Against Hunger’s culture.
In 2019 Action Against Hunger produced the eighth Annual Learning Review. The document highlights key learnings from across our programmes, in order to capitalise on our technical knowledge and expertise. Learning initiatives launched in 2018 Knowledge Hub and No Hunger Radio continued in 2019. Especially, the latter aired a series of podcasts on the 2018 Research Review, showing how innovation and research can overlap.

To position learning in the centre of our organisation, Action Against Hunger launched the inaugural Learning Week in April 2019. This first edition included international webinars (including on research and uptake), talks and podcasts (including a No Hunger Radio series) across the network. Learning Week was a success and contributed to reinforcing the learning culture by providing space for learning between staff, and experiencing how simple, impactful and rewarding learning can be. The Action Against Hunger International Learning Community Facebook Group was created for this occasion and continues to be active with knowledge sharing from across the network.

Research uptake is a critical part of effective research at Action Against Hunger to support the use of the emerging evidence – to inform programming, policy decisions, and future research across our own organisation as well as our partners. In addition to dissemination and publication of research results, Action Against Hunger also aims to support ongoing and active discussion about emerging findings through conferences and events with key stakeholders.

In the following case study, we highlight one example of an event that was held to support uptake of emerging evidence on innovative approaches for treatment of wasting. In addition to focused events like this one, the annual Research 4 Nutrition (R4Nut) Conference also supports presentation and discussion on emerging evidence on broader nutrition topics and the Research 4 Action (R4ACT) workshops allow for small-group, in-depth review of focused areas of evidence. The most recent R4Nut Conference was held in Paris in November 2019, focused on the theme of ‘The Continuum of Undernutrition Prevention and Treatment: Sharing the Current Scientific Evidence’. The conference featured 43 speakers who gave 21 presentations and 30 posters to a group of 170 participants representing 68 institutions.

The aim of the Evidence to Action event was to support this global momentum with focused efforts to reach key stakeholders and partners, raising awareness of the issues, latest approaches, and further opportunities for collaboration.

In order to support the presentation of new evidence and discussion on findings, the event was organised around three distinct themes:

**INNOVATION IN DIAGNOSTICS:** With known limitations to the existing methods used to identify children with acute malnutrition in different contexts, innovation is important to expand our options and reach more children.

- **SIMPLIFIED APPROACHES:** Acute malnutrition is a continuum, and yet moderate and severe acute malnutrition are treated separately, with different protocols and by different organisations which can often result in inefficiencies or even blockages in care. Ready-to-use foods (RUTFs) are a costly component of treatment and supply shortages are not uncommon, limiting the availability of treatment for both moderate and severe acute malnutrition.

- **INTEGRATION INTO HEALTH SYSTEMS:** Treatment of acute malnutrition is often delivered in parallel to the existing health platforms, creating inefficiencies in delivery and the workforce.

- **PUTTING EVIDENCE INTO ACTION:** In addition to the three focused panel discussions, a final panel reflecting on the meeting and forward looking opportunities was chaired by Lucy Lambie of the Guardian Global Development Desk included senior representatives from Action Against Hunger, the UK Department for International Development, the Children’s Investment Fund Foundation (CIFF), and Save the Children UK. Key themes from four panel discussions:
  - Integration of Severe Acute Malnutrition Treatment into Health Systems
  - Investing for the Short- and Long-Term in Treatment
  - Continued Investment in Research to Build the Evidence on What Works
8 FINANCE

Action Against Hunger's International Strategic Plan 2016-2020 has the goal of generating a total annual income of €500 million by 2020. Reaching this target would allow us to increase our interventions to reduce hunger and malnutrition and allow our activities to grow in scale and impact. A related objective for 2020 is for our funding from public sources to be 74 per cent of the total revenue (€370 million) with the remaining 26 per cent (€130 million) be developed through our relationships and partnerships with the public and private sector. Both goals will require us to improve and build upon our excellent record of accomplishment in new and innovative ways, which will enable Action Against Hunger to continue to expand our work with local, national and international partners, donors and civil society organisations around the globe.

The total revenue of €450.2 million in 2019 exceeded all previous records, surpassing the figures in 2018 by €25.7 million. This is an increase of over 6.0 per cent. There were increases in both public and private funds raised in 2019, with expansion in income from public sources by 7.0 per cent and growth in private support by another 8.0 per cent. 2019 saw some significant changes in how we raised private revenue. Private restricted fundraising increased overall from 2018 by 7.2 per cent. However, an increase in restricted corporate funding by over 40.7 per cent was offset by a decrease in restricted individual funding by 40.2 per cent. Unrestricted income remains our largest source of private revenue, comprising 84.0 per cent of private funding (€74.4 million) in 2019. Of the unrestricted income, the amount raised by corporate revenue streams increased by 14.0 per cent. There was a similar increase from individual unrestricted income by 8.4 per cent. Unrestricted income continues to be an important contributor to Action Against Hunger’s global fight against hunger as it allows resources to be deployed efficiently, openly and rapidly to areas where there will be most impact, while supporting Action Against Hunger’s financial independence.

In 2019 Action Against Hunger increased the revenue from public restricted funding by €23.4 million over 2018, with total public revenues of €356.1 million. Multilateral agencies, namely the EU institutions and the United Nations, remain significant donors of public funding, with collective revenue from the EU and UN exceeding €157.7 million. This represents an increase from 2018 of 15.4 per cent.

The United States remained our largest bilateral public donor for the second year running. The United States provided a revenue of €75.8 million during 2019, a slight decrease from the year before. Revenue from the French government in 2019 increased by €7.7 million (from €10.4 million to €18.1 million) and the Spanish government increased their funding by 117.4 per cent (from €5.9 million to €12.9 million). Similarly, revenue from the German government more than doubled in a year, providing a total of €7.62 million.

Higher revenue in 2019 allowed Action Against Hunger to deliver 654 projects against 473 in 2018. Action Against Hunger recorded a total expenditure of €447.4 million in 2019, compared to €394.5 million in 2018.

For every one euro we spent across the Action Against Hunger network, 86.6 cents were dedicated to programmatic activities. A further 7.8 cents was dedicated to fundraising and communication expenses while management, governance and support services comprised of 5.6 per cent of every euro expended.

Action Against Hunger is making progress in achieving its 2020 goals as set out in the International Strategic Plan 2016-2020.

- Total revenue in 2019 is 90.0 per cent of the €500 million 2020 target. Action Against Hunger would need to raise €49.8 million more over the next year to reach the 2020 target.
- Public restricted revenue in 2019 is 96.2 per cent of the €370 million 2020 target, a difference of €13.9 million.
- Private revenue in 2018 is 68.2 per cent of the €130 million 2020 target, a difference of €41.4 million.
WE ADVOCATED FOR GOVERNMENT POLICIES TO REDUCE MALNUTRITION

The number of children with severe acute malnutrition (SAM) who are receiving treatment has risen due to the increased prioritisation of governments and donors to support the scale up and replication of cost effective interventions.

Action Against Hunger has worked with donor governments including the US, UK, France and Spain to ensure nutrition is a core component of aid strategies and programmes. Actions have included influencing France’s Strategy for Food Security, Nutrition and Sustainable Agriculture, and the set-up of a nutrition taskforce within the French Development Agency AFD and informing both, the development of UK DFID’s strategy for Ending Preventable Maternal and Young Child Deaths and the Spanish Cooperation’s Child Strategy.

Advocacy in high-burden countries is critical to achieving lasting change. We have worked with governments to adopt national plans for achieving SDG2.2 on ending malnutrition and the World Health Assembly 2025 health and nutrition targets, in particular across East and West Africa. All countries in the Horn and East Africa have developed nutrition action plans and have integrated nutrition into their national health sector plans and Universal Health Care (UHC) frameworks. Our country programmes support and engage with the Scaling Up Nutrition (SUN) movement and are playing a leading role in national and regional SUN Platforms. We are now also seeing positive trends in resource allocation and political commitment for nutrition.
Elsewhere, a three-year advocacy project in India, ‘Building an enabling environment for improved nutrition results in India’ won the team a “Public Relations in Action” national award.

WE CALLED FOR ACTION TO BREAK THE CYCLE BETWEEN CONFLICT AND HUNGER

This continues to be the focus of an ongoing network-level advocacy initiative. In 2019, we partnered with Save the Children to host a workshop in London with UN Agencies, governments, NGOs and academic experts to develop proposals for improving reporting and accountability for upholding UN Resolution 2417 on conflict and hunger.

The report from this workshop was shared at a UN event in New York, during the Protection of Civilians Days, at which our Nigeria Country Director discussed the links between conflict and hunger in Nigeria and proposed concrete recommendations to strengthen implementation of the resolution.

We are now working on a “causal analysis between violence and food insecurity” together with the Basque Country University. The report, due in 2020, will include a guideline methodology and two case studies.

Sanctions and counter terrorist legislation are increasingly impacting vulnerable people’s access to humanitarian assistance. This is why in 2019 we increased our action to highlight the impacts with both national authorities and key donors. This contributed to ensuring that humanitarian principles and law are respected in the protection of civilians, humanitarian access and principles, giving a joint NGO statement at a UN Security Council Ministerial level meeting on the protection of humanitarian and medical personnel; and co-organising and EU member state briefing on Nigeria.

Other focus countries have included Yemen, Syria, Lebanon and the Occupied Palestinian Territories. We have contributed to improving humanitarian access in Syria and certain zones of Lebanon through dialogue with Lebanese, Syrian and Kurdish de facto authorities and through lobby tours and policy briefs shared with international donors. We have contributed too to monitoring and preventing ‘push’ measures in Lebanon against Syrian refugees through collective actions in collaboration with the EU commission.

In the Occupied Palestinian Territory we have been instrumental in informing the EU member states on the reduction of humanitarian access in Gaza and the forcible transfer of populations in the West Bank, helping to prevent the forced transfer of Bedouins in Khan Al Anmar communities.

As the humanitarian crisis in Yemen continues, we have lobbied global governments including France, the US and the UK, alone and in coalition, on removing obstacles to humanitarian access, and cutting arms sales through actions such as shared reports, private briefing meetings with decision makers, public stunts and press briefings.

WE ENGAGED IN KEY DECISION MAKING FORA

In all contexts officials, parliamentarians and legislators are critical allies and targets for helping deliver our policy aims. This is why across our HQs, regional offices and country programmes we have established relations with parliamentarians and meet regularly with officials from foreign affairs and development ministries. Amongst other things, this has enabled us to influence the US multi-sectoral Nutrition Strategy and Global Food Security Strategy and to support the set-up of a new all-party Parliamentary Group on Nutrition for Growth in the UK. In India, the HQ has conducted multiple workshops with parliamentarians and policy makers. Action Against Hunger teams have been heard multiple times at the French and European Parliament talking about Nigeria, Yemen, arms sales, triple nexus, application of International Humanitarian Law, etc.

We work with our allies across the sector too, playing a leading role in key working groups and alliances such as SFN Civil Society Platforms, Inter Action, Bond, Coordination Sud, VOICE, the CONGDE, the Coalition for Food & Nutrition Security, global clusters and IASC groups, and the International Coalition for Advocacy on Nutrition (ICAN).

Through such alliances we are able to advocate at major global events. We influenced the G7 Civil society recommendations for G7 leaders on health, food security and nutrition and conflict, and participated in the August 2019 G7 Summit. We also participated in the World Food Security Strategy and to support the set-up of a new NGO profiling tool in the Sahel. This has contributed too to a more rapid EU response to the food crisis in southern Mauritania and northern Senegal.

In Mali and Niger, as members of the Humanitarian Country Team, we have led bilateral dialogue with national and regional government authorities and with the EU to ensure that restrictive measures on humanitarian space such as the imposition of armed escorts in Niger.
Action Against Hunger recognises that working with partners is fundamental to maximise the impact we have and achieve a world free from hunger. We believe working with a diverse range of partners, from national governments, to local NGOs, to academic think tanks and other international NGOs, is essential to enable us to develop effective solutions to tackle malnutrition. As the humanitarian sector continues to change, we recognise that partnerships are becoming even more vital.

In 2019, nearly all (98%) of country offices had working partnerships, with 58 per cent of country offices having a local partnership strategy. This is an increase from 2018 where only 49 per cent of country offices had a local partnership strategy.

The most common type of partnership in 2019 was with government bodies (both local and national) and NGOs (both national and international), which were both at 41 per cent. Overall, this means that 82 per cent of partnerships were with governments and NGOs, which is an increase of 20 per cent from 2018. Out of the 41 per cent (a total of 364) of partnerships with NGOs, 44 per cent of these were with national and local NGOs, and 55 per cent were with international NGOs. The proportion of partnerships with UN agencies, the private sector, and academics, think tanks and scientific bodies was much lower than NGOs and government bodies, at 6 per cent, 4 per cent and 6 per cent respectively.

The category of UN agencies was added to the reporting last year. After no country offices reporting having partnerships with UN agencies the previous year, 19 country offices reported partnerships with UN agencies in 2019. While overall only 4 per cent of partnerships were with the private sector, this differed depending on the country office, with the

In Horn and Eastern Africa, Action Against Hunger is running a multi-year campaign calling on national governments to commit to really tackle malnutrition through policy and budget decisions. One campaign focus has been empowering mothers to diagnose acute malnutrition and training community health workers to manage uncomplicated cases. The campaign, Band Together Against Hunger, rallied governments and donors to increase resources for nutrition and engaged groups from across related sectors. The government of Somalia reaffirmed a commitment to spend 3 per cent of its budget on nutrition specific services and 2 per cent on nutrition sensitive investments. A Nutrition Common Resolve Framework was developed with multi-sector stakeholders and the Prime Minister’s office and a long term partnership between Action Against Hunger, the Prime Minister’s Office and the European Union was agreed to strengthen the Scaling Up Nutrition (SUN) movement in Somalia. In Kenya, Uganda, Somalia and Tanzania our parliamentary and stakeholder engagement has resulted in resources for nutrition being prioritised. In Tanzania, we continue to work on building a government backed community health workforce. As part of these efforts we held a UK Advocacy Tour, bringing a Tanzanian MP to London to meet with MPs and discuss long term resourcing for nutrition and the role of parliamentarians globally.
number of private sector partnerships in Mali being high, at a total number of 14. As a result of types of partnerships made, over half (51%) of projects implemented with partners were with local or national governments, within which 59 per cent were with national governments and 41 per cent with local governments. Despite the fact that an equal number of partnerships were formed with NGOs, just under a third of projects implemented with partners were with either local, national or international NGOs.

The most significant reason for building partnerships in 2019 was to increase access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year. Access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year. Access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year. Access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year.

Action Against Hunger reported membership to 98 consortia in 2019, with over half (52%) of Action Against Hunger’s country offices holding the position of lead agency within at least one of these consortia. The Central America office were the lead agency within the most consortia at a total of 14.

Action Against Hunger’s support continues to grow geographically, increasing and diversifying its influence. Action Against Hunger continues to grow its brand, visibility and support to achieve a world in which no child dies from hunger. With the support of individuals, partners, media, restaurants, schools, and more, we can generate the resources necessary to maintain and expand lifesaving programmes in nearly 50 countries around the world.

As a result of types of partnerships made, over half (51%) of projects implemented with partners were with local or national governments, within which 59 per cent were with national governments and 41 per cent with local governments. Despite the fact that an equal number of partnerships were formed with NGOs, just under a third of projects implemented with partners were with either local, national or international NGOs.

The most significant reason for building partnerships in 2019 was to increase access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year. Access to beneficiaries (at 39%). This finding was different from the previous two years where capacity building has been the most prominent reason. Instead, in 2019, capacity building was only the purpose for one quarter of partnerships, down 10 per cent from the previous year. Access to beneficiaries (at 39%).

The research has shown that the motivations for Action Against Hunger to work with local partners can be grouped into three categories: 1) Access and implementation, 2) Building local capacity and 3) Learning and gaining local knowledge. In addition, it has become clear that Action Against Hunger’s technical expertise is its strongest added value to the sector as a whole as well as to local civil society as a partner.

Action Against Hunger recognises that local partnership is a critical part of its operational modality, particularly as the humanitarian sector continues to evolve. However, Action Against Hunger is yet to position itself clearly in the localisation discourse, particularly how and why the organisation works with local partners. As a result, Action Against Hunger recognises the need to build a clearer and more consistent approach to local partnerships.

In 2018, a Partnership Working Group (PWG) was set up to address this gap and review Action Against Hunger’s approach to working with local partners. The aim of the Partnership Project is to build an evidence base on the organisation’s current practices, followed by developing recommendations to inform the next International Strategic Plan for 2021 to 2025. The project draws on both primary and secondary data, involving a variety of methodologies, such as a desk review, a review of partnership tools, surveys with Action Against Hunger staff and local partners, as well as consultations with local civil society and Action Against Hunger staff.

The research has shown that the motivations for Action Against Hunger to work with local partners can be grouped into three categories: 1) Access and implementation, 2) Building local capacity and 3) Learning and gaining local knowledge. In addition, it has become clear that Action Against Hunger’s technical expertise is its strongest added value to the sector as a whole as well as to local civil society as a partner.

However, only 33 per cent of Action Against Hunger’s partnership tools are considered to be operational. As well as findings from the staff survey showing that country offices lack capacity for managing partnerships, especially because they lack tools and expertise. Through our research it has become clear that the underlying barrier for Action Against Hunger is its need to strengthen its partnership culture, which is closely linked to its heritage as a humanitarian organisation that implements directly and alone.

Key recommendations have been developed in response to the findings, including the following:

- Develop a clearly articulated vision for Action Against Hunger on partnership and localisation.
- Develop and update key documents and tools, including developing a definition of local partnership, reviewing partnership guidelines and developing a local partnership policy.
- Improve Action Against Hunger’s partnership management structure by providing training on local partnership, defining roles and responsibilities across member and country offices, and encourage country offices to set up a partnership department.
- Build on Action Against Hunger’s current partnerships, by learning from good practice and developing a two-way feedback mechanism.
- Build a partnership culture.
CYCLONE IDAI IN MOZAMBIQUE: A PARTNERSHIP BETWEEN ACTION AGAINST HUNGER AND KULIMA

After cyclone Idai hit Mozambique in March 2019, 602 people died and a further 146,000 people were displaced. In response to the cyclone, Action Against Hunger connected with its former partner, Kulima, to coordinate and assess the situation.

Action Against Hunger and Kulima conducted an aerial assessment via a helicopter, thanks to the Airbus Foundation, dropping down into areas impacted by the cyclone to discuss the situation with communities. In addition, they used vehicles on the ground to assess impacted areas. Action Against Hunger and Kulima, in collaboration with Aquassistance, then started to implement an emergency WaSH programme.

An evaluation has since been conducted to explore the partnership between Action Against Hunger and Kulima, as well as to look at how they can work together effectively in future responses.

Below are some of the key findings and recommendations from the evaluation:

- The project exceeded its targets and was able to scale up its operations. While this demonstrates the project success, this required extensive effort for the Action Against Hunger team, so in future it would be helpful to consider its own and its partner’s capacity before scaling up.
- Overall, both Action Against Hunger and Kulima staff agreed that the programme was effective. It was clear from responses that both organisations felt that they were capable of delivering the intended life-saving assistance. There was mutual agreement that there was a strong degree of adaptability of the partnership which was necessary to meet the ever changing context and demands of the programme.
- Kulima’s strength is in delivering programmatic activities. This programmatic capability should be utilised in future by ensuring that Action Against Hunger allow Kulima to take the lead on delivering activities, while supporting them in other organisational areas.
- Both Action Against Hunger and Kulima found it challenging working with a new organisation, especially because Kulima had little experience in emergency response. Identifying partnerships in advance, rather than after emergencies have happened, will allow for clearly detailed roles and responsibilities and ensure emergency preparedness is strengthened.
- From responses that both organisations felt that they were capable of delivering the intended life-saving assistance.

In 2019, across 10 countries, Action Against Hunger’s fundraising activities increased our income from private sources by 12 per cent to €92 million. This was mainly achieved through the loyal support of more than one million people globally, who contributed 80 per cent of private income sources. These individuals primarily donate on a regular basis, representing a global community of people committed to creating a world without hunger. This foundation of support gives Action Against Hunger the ability to respond quickly in emergencies and to address ongoing crises worldwide, since 90 per cent of income from individual donors is unrestricted.

Additionally, more than 4,700 companies, foundations, restaurants and schools have placed their trust in Action Against Hunger. Notable highlights in fundraising and communications include:

- Support from more than 2,000 schools and half a million students in 17 countries who participated in the “Race Against Hunger” and raised more than €5 million.
- More than 2,100 branches joined to our Restaurants Against Hunger campaign, raising €1 million, including the invaluable support of Michelin Stars chefs such as Enrico Crippa (Italy), Quique Dacosta (Spain) and Nieves Barragan (UK).
- Partnerships with businesses, such as the partnership to reduce food waste with Starbucks in the UK, France, Spain, and other European countries; an incredible partnership with Share in Germany and Movistar in Spain.
- The US team partnered with CNN to secure donated advertising space, increasing new user traffic on our website; in addition, CNN Anchor Zain Asher was a prominent speaker for the annual Action Against Hunger US Gala, which raised $1.4 million.
Almost half a million euros income from the multidimensional campaign of branded content developed in Spain “the Fight of the Giants”, with the support of Movistar, DKV Salud, Novotel, and El País as media partner, reaching an audience close to €10 million. One of our main objectives is to educate and raise awareness of the rise in global hunger – 821 million people suffered from food insecurity in 2018 - and to demonstrate that Action Against Hunger is the ‘hunger specialist’, an authority on preventing and treating malnutrition. Our aim is to highlight our organisational impact and efficiency, our ability to reach more people, and our expertise in innovating and advocating for better ways to deal with hunger. Our communications activities are essential to driving action from all stakeholders, while growing a community of supporters through social media, partnerships, media outreach, content development, and storytelling. In 2019, we reached millions of people through social media, email, and media outreach. We increased our media visibility among top-tier press including The New York Times, Wall Street Journal, CNN, Newsweek, Reuters, BBC News, Der Tagesspiegel, El País, Liberation, among others.

With our efforts, we will create a movement powered by individuals, foundations, corporations, governments, and local civil society actors to create a better way to deal with hunger, for everyone, for good.

**Case Study**

**The Invisible Monster**

Cinema continues to be one of the most powerful ways of generating engagement in our society. This year, we teamed up with one of Spain’s most successful film directors, Javier Fesser, and Guillermo Fesser, a renowned scriptwriter and journalist, to create a work of fiction about hidden hunger.

 Accompanied by our team at the Iligan base in the Philippines, the Fessers spent three weeks with the people in the communities. Based on these encounters, they wrote a script from the perspective of the children they met. This project was financed through crowdfunding and institutional donors in Spain. The result was “The Invisible Monster”, a 32-minute play about chronic malnutrition. It was filmed with a very small technical team in a rubbish dump near a camp for displaced persons. Using no professional actors, the film wants to portray a harsh reality with a message of hope and optimism. Movistar+, the main pay-TV provider in Spain, bought the broadcasting rights, and the short film has been used as an awareness raising tool in many cities, offered to schools during the “Race Against Hunger”, and presented at festivals.

The Fessers were impressed with our work in the Philippines, and have since become supporters of our organisation, amplifying our message in the media (in over 300 interviews and mentions) and on social media. The culmination of the campaign was a participatory action that, coinciding with the television premiere, invited viewers to make and fly their own kites, a symbol of hope in the film.

**Yemen Campaign: Stop Arms Exports**

The conflict in Yemen has developed into the worst humanitarian crisis of our time. Conflict parties are fighting relentlessly; hunger is being used as a weapon of war. Civilians are barely protected. Over 24 million people in Yemen are urgently in need of humanitarian aid. German arms and technology play a key role in the Yemen war: the Eurofighter, for example, flies air strikes against civilian targets using German parts. Attacks by the conflicting parties on farms, local markets and supply depots, as well as the blocking of transport routes by land, sea and air, systematically starve the people of Yemen and obstruct humanitarian aid.

In 2019, Action Against Hunger in Germany started the awareness campaign “War in Yemen: Stop arms exports, end hunger!”. The main goal was to build pressure on the German government to impose a stop of weapon deliveries to Yemen and all conflict parties involved. In close cooperation with our programme and advocacy department, we developed the content and our main demands towards the German government: to stop arms exports to all warring parties in Yemen, to prolong the export stop for weapon systems to Saudi Arabia and closing loopholes for deliveries as well as to enforce an arms freeze on conflict parties at European level in order to ensure human rights and international humanitarian law on a common basis. Our aim was to engage people with the campaign topic and to invite them to support the organisation on regular basis. This proved successful: from the more than 30,000 signees, we generated more than 20,000 contacts who have agreed to be kept informed about our work.

By March 2020, the 5th anniversary of the Yemen war, 32,000 people signed the petition. We organised a public stunt in front of the Ministry of Economic Affairs using motives of a Yemenite artist. We handed over the petition signatures to the ministry, and requested an official statement. Additionally, we worked together with a broad alliance of organisations from the fields of development, peace and human rights policy and humanitarian aid on an advocacy level to demand a ban on arms exports to the Yemen military coalition.

In March 2020, the German government extended the arms exports ban to Saudi Arabia - also thanks to these advocacy efforts. With our ongoing campaign, we continue demanding a ban on all conflict parties in Yemen at the European level.
ILLUMINATING CITIES AND RAISING AWARENESS THROUGH IMAGES #40ANSDACTIONS

The year 2019 marked Action Against Hunger’s 40th year of actions and the fight against hunger. Despite our work reaching more than 17 million people last year, there are still millions of people suffering from hunger. This is why we organised activities all over France to show that this fight is not over.

ILLUMINATIONS

On the evening of Wednesday, 16 October, many Action Against Hunger supporters mobilised for sensitising action. Façades of emblematic buildings were illuminated to show everyone the importance of the fight we are waging. “821 million people suffer from hunger. After 40 years of action, the fight goes on” was projected on walls in many cities in France; in Avignon, Orleans, Clermont-Ferrand, Dijon, Grenoble, Luneville, Paris and Perpignan, thanks to the work of many supporters.

This sentence reminded us why we decided to fight this fight 40 years ago, but also why it is important to continue it today. Since its creation, the organisation has changed and adapted to the needs of the people we support. If at the beginning, the aim was to respond only to emergencies people we support. If at the beginning, the aim was to respond only to emergencies, today our work is to fight this fight 40 years ago, but also their joys and their victories. A total of 20 participants, people we support on a daily basis, spoke through the images and showed us their vision of the world during this photographic exhibition.

The exhibitions took place in Paris and Arles, showcasing the participants’ photographs as well as Guillaume Binet’s work. More than 10,000 people visited the exhibitions and participated in conferences and presentations.

The photographs were also published in a book of the same name, “What I see”. Parts of the proceeds will be donated to Action Against Hunger to support our activities.

EXHIBITION

On the same day, we launched the photo exhibition, “What I see”. This exhibition was the result of various workshops we conducted in four of our countries of intervention across four continents. With the support of photographer Guillaume Binet, we trained the participants to take pictures so that they could document their daily lives, their difficulties, their worries but also their joys and their victories.

A total of 20 participants, people we support on a daily basis, spoke through the images and showed us their vision of the world during this photographic exhibition.
